The temperature is rising! Build a solar oven this week (or make a design for one) and think how you can harness the sun’s heat to make a treat!

What are the some things you could change about the oven in the video? These are different “variables” you can test.

Draw your design for a solar oven below (imagine you have all the materials you want). Label its parts and materials!

Did you make a solar oven this week? If so, what did you cook and what variables did you test?

What else do you wonder about solar energy?

Send your completed sheet to danniey@sarsef.org by Friday morning to be included in our follow-up!
